```

## DESCRIPTION

Calculate similarity matrices using fingerprint bit-vector or vector strings data in *SD*, *FP* and *CSV/TSV* text file(s) and generate CSV/TSV text file(s) containing values for specified similarity and distance coefficients.

The scripts *SimilarityMatrixSDFFiles.pl* and *SimilarityMatrixTextFiles.pl* have been removed from the current release of MayaChemTools and their functionality merged with this script.

The valid *SDFFile* extensions are *.sdf* and *.sd*. All SD files in a current directory can be specified either by *\*.sdf* or the current directory name.

The valid *FPFile* extensions are *.fpf* and *.fp*. All FP files in a current directory can be specified either by *\*.fpf* or the current directory name.

The valid *TextFile* extensions are *.csv* and *.tsv* for comma/semicolon and tab delimited text files respectively. All other file names are ignored. All text files in a current directory can be specified by *\*.csv*, *\*.tsv*, or the current directory name. The *--indelimit* option determines the format of *TextFile(s)*. Any file which doesn't correspond to the format indicated by *--indelimit* option is ignored.

Example of *FP* file containing fingerprints bit-vector string data:

```
#

## OPTIONS

### --alpha *number*

Value of alpha parameter for calculating *Tversky* similarity coefficient specified for -b, --BitVectorComparisonMode option. It corresponds to weights assigned for bits set to "1" in a pair of fingerprint bit-vectors during the calculation of similarity coefficient. Possible values: 0 to 1. Default value: <0.5>.

### --beta *number*

Value of beta parameter for calculating *WeightedTanimoto* and *WeightedTversky* similarity coefficients specified for -b, --BitVectorComparisonMode option. It is used to weight the contributions of bits set to "0" during the calculation of similarity coefficients. Possible values: 0 to 1. Default value of <1> makes *WeightedTanimoto* and *WeightedTversky* equivalent to *Tanimoto* and *Tversky*.

### -b, --BitVectorComparisonMode *All* | "*TanimotoSimilarity*,[*TverskySimilarity*,...]"

Specify what similarity coefficients to use for calculating similarity matrices for fingerprints bit-vector strings data values in *TextFile(s)*: calculate similarity matrices for all supported similarity coefficients or specify a comma delimited list of similarity coefficients. Possible values: *All* | "*TanimotoSimilarity*,[*TverskySimilarity*,...]. Default: *TanimotoSimilarity*

*All* uses complete list of supported similarity coefficients: *BaroniUrbaniSimilarity*, *BuserSimilarity*, *CosineSimilarity*, *DiceSimilarity*, *DennisSimilarity*, *ForbesSimilarity*, *FossumSimilarity*, *HamannSimilarity*, *JacardSimilarity*, *Kulczynski1Similarity*, *Kulczynski2Similarity*, *MatchingSimilarity*, *McConnaugheySimilarity*, *OchiaiSimilarity*, *PearsonSimilarity*, *RogersTanimotoSimilarity*, *RussellRaoSimilarity*, *SimpsonSimilarity*, *SkoalSneath1Similarity*, *SkoalSneath2Similarity*, *SkoalSneath3Similarity*, *TanimotoSimilarity*, *TverskySimilarity*, *YuleSimilarity*, *WeightedTanimotoSimilarity*, *WeightedTverskySimilarity*. These similarity coefficients are described below.

For two fingerprint bit-vectors A and B of same size, let:

```
Na = Number of bits set to "1" in A
Nb = Number of bits set to "1" in B
Nc = Number of bits set to "1" in both A and B
Nd = Number of bits set to "0" in both A and B

Nt = Number of bits set to "1" or "0" in A or B (Size of A or B)
Nt = Na + Nb - Nc + Nd

Na - Nc = Number of bits set to "1" in A but not in B
Nb - Nc = Number of bits set to "1" in B but not in A
```

Then, various similarity coefficients [ Ref. 40 - 42 ] for a pair of bit-vectors A and B are defined as follows:

*BaroniUrbaniSimilarity*:  $(\text{SQRT}(Nc * Nd) + Nc) / (\text{SQRT}(Nc * Nd) + Nc + (Na - Nc) + (Nb - Nc))$  ( same as Buser )

*BuserSimilarity*:  $(\text{SQRT}(Nc * Nd) + Nc) / (\text{SQRT}(Nc * Nd) + Nc + (Na - Nc) + (Nb - Nc))$  ( same as BaroniUrbani )

*CosineSimilarity*:  $Nc / \text{SQRT}(Na * Nb)$  (same as Ochiai)

*DiceSimilarity*:  $(2 * Nc) / (Na + Nb)$

*DennisSimilarity*:  $(Nc * Nd - ((Na - Nc) * (Nb - Nc))) / \text{SQRT}(Nt * Na * Nb)$

*ForbesSimilarity*:  $(Nt * Nc) / (Na * Nb)$

*FossumSimilarity*:  $(N_t * ((N_c - 1/2) ** 2) / (N_a * N_b))$

*HamannSimilarity*:  $((N_c + N_d) - (N_a - N_c) - (N_b - N_c)) / N_t$

*JaccardSimilarity*:  $N_c / ((N_a - N_c) + (N_b - N_c) + N_c) = N_c / (N_a + N_b - N_c)$  (same as Tanimoto)

*Kulczynski1Similarity*:  $N_c / ((N_a - N_c) + (N_b - N_c)) = N_c / (N_a + N_b - 2N_c)$

*Kulczynski2Similarity*:  $((N_c / 2) * (2 * N_c + (N_a - N_c) + (N_b - N_c))) / ((N_c + (N_a - N_c)) * (N_c + (N_b - N_c))) = 0.5 * (N_c / N_a + N_c / N_b)$

*MatchingSimilarity*:  $(N_c + N_d) / N_t$

*McConnaugheySimilarity*:  $(N_c ** 2 - (N_a - N_c) * (N_b - N_c)) / (N_a * N_b)$

*OchiaiSimilarity*:  $N_c / \text{SQRT}(N_a * N_b)$  (same as Cosine)

*PearsonSimilarity*:  $((N_c * N_d) - ((N_a - N_c) * (N_b - N_c))) / \text{SQRT}(N_a * N_b * (N_a - N_c + N_d) * (N_b - N_c + N_d))$

*RogersTanimotoSimilarity*:  $(N_c + N_d) / ((N_a - N_c) + (N_b - N_c) + N_t) = (N_c + N_d) / (N_a + N_b - 2N_c + N_t)$

*RussellRaoSimilarity*:  $N_c / N_t$

*SimpsonSimilarity*:  $N_c / \text{MIN}(N_a, N_b)$

*SkoalSneath1Similarity*:  $N_c / (N_c + 2 * (N_a - N_c) + 2 * (N_b - N_c)) = N_c / (2 * N_a + 2 * N_b - 3 * N_c)$

*SkoalSneath2Similarity*:  $(2 * N_c + 2 * N_d) / (N_c + N_d + N_t)$

*SkoalSneath3Similarity*:  $(N_c + N_d) / ((N_a - N_c) + (N_b - N_c)) = (N_c + N_d) / (N_a + N_b - 2 * N_c)$

*TanimotoSimilarity*:  $N_c / ((N_a - N_c) + (N_b - N_c) + N_c) = N_c / (N_a + N_b - N_c)$  (same as Jaccard)

*TverskySimilarity*:  $N_c / (\alpha * (N_a - N_c) + (1 - \alpha) * (N_b - N_c) + N_c) = N_c / (\alpha * (N_a - N_b) + N_b)$

*YuleSimilarity*:  $((N_c * N_d) - ((N_a - N_c) * (N_b - N_c))) / ((N_c * N_d) + ((N_a - N_c) * (N_b - N_c)))$

Values of Tanimoto/Jaccard and Tversky coefficients are dependent on only those bit which are set to "1" in both A and B. In order to take into account all bit positions, modified versions of Tanimoto [ Ref. 42 ] and Tversky [ Ref. 43 ] have been developed.

Let:

$N_a'$  = Number of bits set to "0" in A

$N_b'$  = Number of bits set to "0" in B

$N_c'$  = Number of bits set to "0" in both A and B

Tanimoto':  $N_c' / ((N_a' - N_c') + (N_b' - N_c') + N_c') = N_c' / (N_a' + N_b' - N_c')$

Tversky':  $N_c' / (\alpha * (N_a' - N_c') + (1 - \alpha) * (N_b' - N_c') + N_c') = N_c' / (\alpha * (N_a' - N_b') + N_b')$

Then:

*WeightedTanimotoSimilarity* =  $\text{beta} * \text{Tanimoto} + (1 - \text{beta}) * \text{Tanimoto}'$

*WeightedTverskySimilarity* =  $\text{beta} * \text{Tversky} + (1 - \text{beta}) * \text{Tversky}'$

-c, --ColMode *ColNum* | *ColLabel*

Specify how columns are identified in *TextFile(s)*: using column number or column label. Possible values: *ColNum* or *ColLabel*. Default value: *ColNum*.

--CompoundIDCol *col number* | *col name*

This value is -c, --ColMode mode specific. It specifies input *TextFile(s)* column to use for generating compound ID for similarity matrices in output *TextFile(s)*. Possible values: *col number* or *col label*. Default value: *first column containing the word compoundID in its column label or sequentially generated IDs*.

--CompoundIDPrefix *text*

Specify compound ID prefix to use during sequential generation of compound IDs for input *SDFFile(s)* and *TextFile(s)*. Default value: *Cmpd*. The default value generates compound IDs which look like *Cmpd<Number>*.

For input *SDFFile(s)*, this value is only used during *LabelPrefix* | *MolNameOrLabelPrefix* values of --CompoundIDMode option; otherwise, it's ignored.

Examples for *LabelPrefix* or *MolNameOrLabelPrefix* value of --CompoundIDMode:

Compound

The values specified above generates compound IDs which correspond to *Compound<Number>* instead of default value of *Cmpd<Number>*.

--CompoundIDField *DataFieldName*

Specify input *SDFFile(s)* datafield label for generating compound IDs. This value is only used during *DataField* value of --CompoundIDMode option.

Examples for *DataField* value of --CompoundIDMode:

MolID

ExtReg

--CompoundIDMode *DataField | MolName | LabelPrefix | MolNameOrLabelPrefix*

Specify how to generate compound IDs from input *SDFFile(s)* for similarity matrix CSV/TSV text file(s): use a *SDFFile(s)* datafield value; use molname line from *SDFFile(s)*; generate a sequential ID with specific prefix; use combination of both MolName and LabelPrefix with usage of LabelPrefix values for empty molname lines.

Possible values: *DataField | MolName | LabelPrefix | MolNameOrLabelPrefix*. Default: *LabelPrefix*.

For *MolNameAndLabelPrefix* value of --CompoundIDMode, molname line in *SDFFile(s)* takes precedence over sequential compound IDs generated using *LabelPrefix* and only empty molname values are replaced with sequential compound IDs.

-d, --detail *InfoLevel*

Level of information to print about lines being ignored. Default: 1. Possible values: 1, 2 or 3.

-f, --fast

In this mode, fingerprints columns specified using --FingerprintsCol for *TextFile(s)* and --FingerprintsField for *SDFFile(s)* are assumed to contain valid fingerprints data and no checking is performed before calculating similarity matrices. By default, fingerprints data is validated before computing pairwise similarity and distance coefficients.

--FingerprintsCol *col number | col name*

This value is -c, --colmode specific. It specifies fingerprints column to use during calculation similarity matrices for *TextFile(s)*. Possible values: *col number or col label*. Default value: *first column containing the word Fingerprints in its column label*.

--FingerprintsField *FieldLabel*

Fingerprints field label to use during calculation similarity matrices for *SDFFile(s)*. Default value: *first data field label containing the word Fingerprints in its label*

-h, --help

Print this help message.

--InDelim *comma | semicolon*

Input delimiter for CSV *TextFile(s)*. Possible values: *comma or semicolon*. Default value: *comma*. For TSV files, this option is ignored and *tab* is used as a delimiter.

--InputDataMode *LoadInMemory | ScanFile*

Specify how fingerprints bit-vector or vector strings data from *SD, FP and CSV/TSV* fingerprint file(s) is processed: Retrieve, process and load all available fingerprints data in memory; Retrieve and process data for fingerprints one at a time. Possible values : *LoadInMemory | ScanFile*. Default: *LoadInMemory*.

During *LoadInMemory* value of --InputDataMode, fingerprints bit-vector or vector strings data from input file is retrieved, processed, and loaded into memory all at once as fingerprints objects for generation for similarity matrices.

During *ScanFile* value of --InputDataMode, multiple passes over the input fingerprints file are performed to retrieve and process fingerprints bit-vector or vector strings data one at a time to generate fingerprints objects used during generation of similarity matrices. A temporary copy of the input fingerprints file is made at the start and deleted after generating the matrices.

*ScanFile* value of --InputDataMode allows processing of arbitrary large fingerprints files without any additional memory requirement.

-m, --mode *AutoDetect | FingerprintsBitVectorString | FingerprintsVectorString*

Format of fingerprint strings data in *TextFile(s)*: automatically detect format of fingerprints string created by MayaChemTools fingerprints generation scripts or explicitly specify its format. Possible values: *AutoDetect | FingerprintsBitVectorString | FingerprintsVectorString*. Default value: *AutoDetect*.

--OutDelim *comma | tab | semicolon*

Delimiter for output CSV/TSV text file(s). Possible values: *comma, tab, or semicolon* Default value: *comma*.

--OutMatrixFormat *RowsAndColumns | IDPairsAndValue*

Specify how similarity or distance values calculated for fingerprints vector and bit-vector strings are written to the output CSV/TSV text file(s): Generate text files containing rows and columns with their labels corresponding to compound IDs and each matrix element value corresponding to similarity or distance between corresponding compounds; Generate text files containing rows containing compoundIDs for two compounds followed by similarity or distance value between these compounds.

Possible values: *RowsAndColumns, or IDPairsAndValue*. Default value: *RowsAndColumns*.

The value of --OutMatrixFormat in conjunction with --OutMatrixType determines type of data written to output files and allows generation of up to 6 different output data formats:

OutMatrixFormat OutMatrixType

RowsAndColumns FullMatrix [ DEFAULT ]

RowsAndColumns UpperTriangularMatrix

RowsAndColumns LowerTriangularMatrix

```
IDPairsAndValue FullMatrix
IDPairsAndValue UpperTriangularMatrix
IDPairsAndValue LowerTriangularMatrix
```

Example of data in output file for *RowsAndColumns* --OutMatrixFormat value for *FullMatrix* value of --OutMatrixType:

```
" " , "Cmpd1" , "Cmpd2" , "Cmpd3" , "Cmpd4" , "Cmpd5" , "Cmpd6" , ... ..
"Cmpd1" , "1" , "0.04" , "0.25" , "0.13" , "0.11" , "0.2" , ... ..
"Cmpd2" , "0.04" , "1" , "0.06" , "0.05" , "0.19" , "0.07" , ... ..
"Cmpd3" , "0.25" , "0.06" , "1" , "0.12" , "0.22" , "0.25" , ... ..
"Cmpd4" , "0.13" , "0.05" , "0.12" , "1" , "0.11" , "0.13" , ... ..
"Cmpd5" , "0.11" , "0.19" , "0.22" , "0.11" , "1" , "0.17" , ... ..
"Cmpd6" , "0.2" , "0.07" , "0.25" , "0.13" , "0.17" , "1" , ... ..
... ..
... ..
... ..
```

Example of data in output file for *RowsAndColumns* --OutMatrixFormat value for *UpperTriangularMatrix* value of --OutMatrixType:

```
" " , "Cmpd1" , "Cmpd2" , "Cmpd3" , "Cmpd4" , "Cmpd5" , "Cmpd6" , ... ..
"Cmpd1" , "1" , "0.04" , "0.25" , "0.13" , "0.11" , "0.2" , ... ..
"Cmpd2" , "1" , "0.06" , "0.05" , "0.19" , "0.07" , ... ..
"Cmpd3" , "1" , "0.12" , "0.22" , "0.25" , ... ..
"Cmpd4" , "1" , "0.11" , "0.13" , ... ..
"Cmpd5" , "1" , "0.17" , ... ..
"Cmpd6" , "1" , ... ..
... ..
... ..
... ..
```

Example of data in output file for *RowsAndColumns* --OutMatrixFormat value for *LowerTriangularMatrix* value of --OutMatrixType:

```
" " , "Cmpd1" , "Cmpd2" , "Cmpd3" , "Cmpd4" , "Cmpd5" , "Cmpd6" , ... ..
"Cmpd1" , "1"
"Cmpd2" , "0.04" , "1"
"Cmpd3" , "0.25" , "0.06" , "1"
"Cmpd4" , "0.13" , "0.05" , "0.12" , "1"
"Cmpd5" , "0.11" , "0.19" , "0.22" , "0.11" , "1"
"Cmpd6" , "0.2" , "0.07" , "0.25" , "0.13" , "0.17" , "1"
... ..
... ..
... ..
```

Example of data in output file for *IDPairsAndValue* --OutMatrixFormat value for <FullMatrix> value of OutMatrixType:

```
"CmpdID1" , "CmpdID2" , "Coefficient Value"
"Cmpd1" , "Cmpd1" , "1"
"Cmpd1" , "Cmpd2" , "0.04"
"Cmpd1" , "Cmpd3" , "0.25"
"Cmpd1" , "Cmpd4" , "0.13"
... ..
... ..
... ..
"Cmpd2" , "Cmpd1" , "0.04"
"Cmpd2" , "Cmpd2" , "1"
"Cmpd2" , "Cmpd3" , "0.06"
"Cmpd2" , "Cmpd4" , "0.05"
... ..
... ..
... ..
"Cmpd3" , "Cmpd1" , "0.25"
"Cmpd3" , "Cmpd2" , "0.06"
"Cmpd3" , "Cmpd3" , "1"
"Cmpd3" , "Cmpd4" , "0.12"
... ..
... ..
... ..
```

Example of data in output file for *IDPairsAndValue* --OutMatrixFormat value for <UpperTriangularMatrix> value of --OutMatrixType:

```
"CmpdID1" , "CmpdID2" , "Coefficient Value"
"Cmpd1" , "Cmpd1" , "1"
"Cmpd1" , "Cmpd2" , "0.04"
```

```
"Cmpd1", "Cmpd3", "0.25"
"Cmpd1", "Cmpd4", "0.13"
... ..
... ..
... ..
"Cmpd2", "Cmpd2", "1"
"Cmpd2", "Cmpd3", "0.06"
"Cmpd2", "Cmpd4", "0.05"
... ..
... ..
... ..
"Cmpd3", "Cmpd3", "1"
"Cmpd3", "Cmpd4", "0.12"
... ..
... ..
... ..
```

Example of data in output file for *IDPairsAndValue* --OutMatrixFormat value for <LowerTriangularMatrix> value of --OutMatrixType:

```
"CmpdID1", "CmpdID2", "Coefficient Value"
"Cmpd1", "Cmpd1", "1"
"Cmpd2", "Cmpd1", "0.04"
"Cmpd2", "Cmpd2", "1"
"Cmpd3", "Cmpd1", "0.25"
"Cmpd3", "Cmpd2", "0.06"
"Cmpd3", "Cmpd3", "1"
"Cmpd4", "Cmpd1", "0.13"
"Cmpd4", "Cmpd2", "0.05"
"Cmpd4", "Cmpd3", "0.12"
"Cmpd4", "Cmpd4", "1"
... ..
... ..
... ..
```

--OutMatrixType *FullMatrix* | *UpperTriangularMatrix* | *LowerTriangularMatrix*

Type of similarity or distance matrix to calculate for fingerprints vector and bit-vector strings: Calculate full matrix; Calculate lower triangular matrix including diagonal; Calculate upper triangular matrix including diagonal.

Possible values: *FullMatrix*, *UpperTriangularMatrix*, or *LowerTriangularMatrix*. Default value: *FullMatrix*.

The value of --OutMatrixType in conjunction with --OutMatrixFormat determines type of data written to output files.

-o, --overwrite

Overwrite existing files

-p, --precision *number*

Precision of calculated values in the output file. Default: up to 2 decimal places. Valid values: positive integers.

-q, --quote *Yes* | *No*

Put quote around column values in output CSV/TSV text file(s). Possible values: *Yes* or *No*. Default value: *Yes*.

-r, --root *RootName*

New file name is generated using the root: <Root><BitVectorComparisonMode>.<Ext> or <Root><VectorComparisonMode><VectorComparisonFormulism>.<Ext>. The csv, and tsv <Ext> values are used for comma/semicolon, and tab delimited text files respectively. This option is ignored for multiple input files.

-v, --VectorComparisonMode *All* | *"TanimotoSimilarity,[ManhattanDistance,...]"*

Specify what similarity or distance coefficients to use for calculating similarity matrices for fingerprint vector strings data values in *TextFile(s)*: calculate similarity matrices for all supported similarity and distance coefficients or specify a comma delimited list of similarity and distance coefficients. Possible values: *All* | *"TanimotoSimilarity,[ManhattanDistance,...]"*. Default: *TanimotoSimilarity*.

The value of -v, --VectorComparisonMode, in conjunction with --VectorComparisonFormulism, decides which type of similarity and distance coefficient formulism gets used.

*All* uses complete list of supported similarity and distance coefficients: *CosineSimilarity*, *CzekanowskiSimilarity*, *DiceSimilarity*, *OchiaiSimilarity*, *JaccardSimilarity*, *SorensonSimilarity*, *TanimotoSimilarity*, *CityBlockDistance*, *EuclideanDistance*, *HammingDistance*, *ManhattanDistance*, *SoergelDistance*. These similarity and distance coefficients are described below.

FingerprintsVector.pm module, used to calculate similarity and distance coefficients, provides support to perform comparison between vectors containing three different types of values:

Type I: OrderedNumericalValues

```
. Size of two vectors are same
```

- . Vectors contain real values in a specific order. For example: MACCS keys count, Topological pharmacophore atom pairs and so on.

#### Type II: UnorderedNumericalValues

- . Size of two vectors might not be same
- . Vectors contain unordered real value identified by value IDs. For example: Topological atom pairs, Topological atom torsions and so on

#### Type III: AlphaNumericalValues

- . Size of two vectors might not be same
- . Vectors contain unordered alphanumerical values. For example: Extended connectivity fingerprints, atom neighborhood fingerprints.

Before performing similarity or distance calculations between vectors containing UnorderedNumericalValues or AlphaNumericalValues, the vectors are transformed into vectors containing unique OrderedNumericalValues using value IDs for UnorderedNumericalValues and values itself for AlphaNumericalValues.

Three forms of similarity and distance calculation between two vectors, specified using --VectorComparisonFormulism option, are supported: *AlgebraicForm*, *BinaryForm* or *SetTheoreticForm*.

For *BinaryForm*, the ordered list of processed final vector values containing the value or count of each unique value type is simply converted into a binary vector containing 1s and 0s corresponding to presence or absence of values before calculating similarity or distance between two vectors.

For two fingerprint vectors A and B of same size containing OrderedNumericalValues, let:

N = Number values in A or B

Xa = Values of vector A

Xb = Values of vector B

Xai = Value of ith element in A

Xbi = Value of ith element in B

SUM = Sum of i over N values

For SetTheoreticForm of calculation between two vectors, let:

SetIntersectionXaXb = SUM ( MIN ( Xai, Xbi ) )

SetDifferenceXaXb = SUM ( Xai ) + SUM ( Xbi ) - SUM ( MIN ( Xai, Xbi ) )

For BinaryForm of calculation between two vectors, let:

Na = Number of bits set to "1" in A = SUM ( Xai )

Nb = Number of bits set to "1" in B = SUM ( Xbi )

Nc = Number of bits set to "1" in both A and B = SUM ( Xai \* Xbi )

Nd = Number of bits set to "0" in both A and B

= SUM ( 1 - Xai - Xbi + Xai \* Xbi )

N = Number of bits set to "1" or "0" in A or B = Size of A or B = Na + Nb - Nc + Nd

Additionally, for BinaryForm various values also correspond to:

Na = | Xa |

Nb = | Xb |

Nc = | SetIntersectionXaXb |

Nd = N - | SetDifferenceXaXb |

| SetDifferenceXaXb | = N - Nd = Na + Nb - Nc + Nd - Nd = Na + Nb - Nc  
= | Xa | + | Xb | - | SetIntersectionXaXb |

Various similarity and distance coefficients [ Ref 40, Ref 62, Ref 64 ] for a pair of vectors A and B in *AlgebraicForm*, *BinaryForm* and *SetTheoreticForm* are defined as follows:

CityBlockDistance: ( same as HammingDistance and ManhattanDistance)

*AlgebraicForm*: SUM ( ABS ( Xai - Xbi ) )

*BinaryForm*: ( Na - Nc ) + ( Nb - Nc ) = Na + Nb - 2 \* Nc

*SetTheoreticForm*: | SetDifferenceXaXb | - | SetIntersectionXaXb | = SUM ( Xai ) + SUM ( Xbi ) - 2 \* ( SUM ( MIN ( Xai, Xbi ) ) )

CosineSimilarity: ( same as OchiaiSimilarityCoefficient)

*AlgebraicForm*: SUM ( Xai \* Xbi ) / SQRT ( SUM ( Xai \*\* 2 ) \* SUM ( Xbi \*\* 2 ) )

*BinaryForm*: Nc / SQRT ( Na \* Nb )

*SetTheoreticForm*: | SetIntersectionXaXb | / SQRT ( |Xa| \* |Xb| ) = SUM ( MIN ( Xai, Xbi ) ) / SQRT ( SUM ( Xai ) \* SUM ( Xbi ) )

CzekanowskiSimilarity: ( same as DiceSimilarity and SorensonSimilarity)

*AlgebraicForm*:  $(2 * (\text{SUM} (X_{ai} * X_{bi}))) / (\text{SUM} (X_{ai} ** 2) + \text{SUM} (X_{bi} ** 2))$

*BinaryForm*:  $2 * N_c / (N_a + N_b)$

*SetTheoreticForm*:  $2 * |\text{SetIntersectionXaXb}| / (|X_a| + |X_b|) = 2 * (\text{SUM} (\text{MIN} (X_{ai}, X_{bi}))) / (\text{SUM} (X_{ai}) + \text{SUM} (X_{bi}))$

DiceSimilarity: ( same as CzekanowskiSimilarity and SorensonSimilarity)

*AlgebraicForm*:  $(2 * (\text{SUM} (X_{ai} * X_{bi}))) / (\text{SUM} (X_{ai} ** 2) + \text{SUM} (X_{bi} ** 2))$

*BinaryForm*:  $2 * N_c / (N_a + N_b)$

*SetTheoreticForm*:  $2 * |\text{SetIntersectionXaXb}| / (|X_a| + |X_b|) = 2 * (\text{SUM} (\text{MIN} (X_{ai}, X_{bi}))) / (\text{SUM} (X_{ai}) + \text{SUM} (X_{bi}))$

EuclideanDistance:

*AlgebraicForm*:  $\text{SQRT} (\text{SUM} ((X_{ai} - X_{bi}) ** 2))$

*BinaryForm*:  $\text{SQRT} ((N_a - N_c) + (N_b - N_c)) = \text{SQRT} (N_a + N_b - 2 * N_c)$

*SetTheoreticForm*:  $\text{SQRT} (|\text{SetDifferenceXaXb}| - |\text{SetIntersectionXaXb}|) = \text{SQRT} (\text{SUM} (X_{ai}) + \text{SUM} (X_{bi}) - 2 * (\text{SUM} (\text{MIN} (X_{ai}, X_{bi}))))$

HammingDistance: ( same as CityBlockDistance and ManhattanDistance)

*AlgebraicForm*:  $\text{SUM} (\text{ABS} (X_{ai} - X_{bi}))$

*BinaryForm*:  $(N_a - N_c) + (N_b - N_c) = N_a + N_b - 2 * N_c$

*SetTheoreticForm*:  $|\text{SetDifferenceXaXb}| - |\text{SetIntersectionXaXb}| = \text{SUM} (X_{ai}) + \text{SUM} (X_{bi}) - 2 * (\text{SUM} (\text{MIN} (X_{ai}, X_{bi})))$

JaccardSimilarity: ( same as TanimotoSimilarity)

*AlgebraicForm*:  $\text{SUM} (X_{ai} * X_{bi}) / (\text{SUM} (X_{ai} ** 2) + \text{SUM} (X_{bi} ** 2) - \text{SUM} (X_{ai} * X_{bi}))$

*BinaryForm*:  $N_c / ((N_a - N_c) + (N_b - N_c) + N_c) = N_c / (N_a + N_b - N_c)$

*SetTheoreticForm*:  $|\text{SetIntersectionXaXb}| / |\text{SetDifferenceXaXb}| = \text{SUM} (\text{MIN} (X_{ai}, X_{bi})) / (\text{SUM} (X_{ai}) + \text{SUM} (X_{bi}) - \text{SUM} (\text{MIN} (X_{ai}, X_{bi})))$

ManhattanDistance: ( same as CityBlockDistance and HammingDistance)

*AlgebraicForm*:  $\text{SUM} (\text{ABS} (X_{ai} - X_{bi}))$

*BinaryForm*:  $(N_a - N_c) + (N_b - N_c) = N_a + N_b - 2 * N_c$

*SetTheoreticForm*:  $|\text{SetDifferenceXaXb}| - |\text{SetIntersectionXaXb}| = \text{SUM} (X_{ai}) + \text{SUM} (X_{bi}) - 2 * (\text{SUM} (\text{MIN} (X_{ai}, X_{bi})))$

OchiaiSimilarity: ( same as CosineSimilarity)

*AlgebraicForm*:  $\text{SUM} (X_{ai} * X_{bi}) / \text{SQRT} (\text{SUM} (X_{ai} ** 2) * \text{SUM} (X_{bi} ** 2))$

*BinaryForm*:  $N_c / \text{SQRT} (N_a * N_b)$

*SetTheoreticForm*:  $|\text{SetIntersectionXaXb}| / \text{SQRT} (|X_a| * |X_b|) = \text{SUM} (\text{MIN} (X_{ai}, X_{bi})) / \text{SQRT} (\text{SUM} (X_{ai}) * \text{SUM} (X_{bi}))$

SorensonSimilarity: ( same as CzekanowskiSimilarity and DiceSimilarity)

*AlgebraicForm*:  $(2 * (\text{SUM} (X_{ai} * X_{bi}))) / (\text{SUM} (X_{ai} ** 2) + \text{SUM} (X_{bi} ** 2))$

*BinaryForm*:  $2 * N_c / (N_a + N_b)$

*SetTheoreticForm*:  $2 * |\text{SetIntersectionXaXb}| / (|X_a| + |X_b|) = 2 * (\text{SUM} (\text{MIN} (X_{ai}, X_{bi}))) / (\text{SUM} (X_{ai}) + \text{SUM} (X_{bi}))$

SoergelDistance:

*AlgebraicForm*:  $\text{SUM} (\text{ABS} (X_{ai} - X_{bi})) / \text{SUM} (\text{MAX} (X_{ai}, X_{bi}))$

*BinaryForm*:  $1 - N_c / (N_a + N_b - N_c) = (N_a + N_b - 2 * N_c) / (N_a + N_b - N_c)$

*SetTheoreticForm*:  $(|\text{SetDifferenceXaXb}| - |\text{SetIntersectionXaXb}|) / |\text{SetDifferenceXaXb}| = (\text{SUM} (X_{ai}) + \text{SUM} (X_{bi}) - 2 * (\text{SUM} (\text{MIN} (X_{ai}, X_{bi})))) / (\text{SUM} (X_{ai}) + \text{SUM} (X_{bi}) - \text{SUM} (\text{MIN} (X_{ai}, X_{bi})))$

TanimotoSimilarity: ( same as JaccardSimilarity)

*AlgebraicForm*:  $\text{SUM} (X_{ai} * X_{bi}) / (\text{SUM} (X_{ai} ** 2) + \text{SUM} (X_{bi} ** 2) - \text{SUM} (X_{ai} * X_{bi}))$

*BinaryForm*:  $N_c / ((N_a - N_c) + (N_b - N_c) + N_c) = N_c / (N_a + N_b - N_c)$

*SetTheoreticForm*:  $|\text{SetIntersectionXaXb}| / |\text{SetDifferenceXaXb}| = \text{SUM} (\text{MIN} (X_{ai}, X_{bi})) / (\text{SUM} (X_{ai}) + \text{SUM} (X_{bi}) - \text{SUM} (\text{MIN} (X_{ai}, X_{bi})))$

--VectorComparisonFormulism *All* | "*AlgebraicForm*,*BinaryForm*,*SetTheoreticForm*"

Specify fingerprints vector comparison formulism to use for calculation similarity and distance coefficients during -v,

--VectorComparisonMode: use all supported comparison formulisms or specify a comma delimited. Possible values: *All* | "*AlgebraicForm*,*BinaryForm*,*SetTheoreticForm*". Default value: *AlgebraicForm*.

*All* uses all three forms of supported vector comparison formulism for values of -v, --VectorComparisonMode option.

For fingerprint vector strings containing AlphaNumericalValues data values - ExtendedConnectivityFingerprints, AtomNeighborhoodsFingerprints and so on - all three formulism result in same value during similarity and distance calculations.

`-w, --WorkingDir DirName`

Location of working directory. Default: current directory.

## EXAMPLES

To generate a similarity matrix corresponding to Tanimoto similarity coefficient for fingerprints bit-vector strings data corresponding to supported fingerprints in text file present in a column name containing Fingerprint substring by loading all fingerprints data into memory and create a SampleFPHexTanimotoSimilarity.csv file containing compound IDs retrieved from column name containing CompoundID substring, type:

```
% SimilarityMatricesFingerprints.pl -o SampleFPHex.csv
```

To generate a similarity matrix corresponding to Tanimoto similarity coefficient for fingerprints bit-vector strings data corresponding to supported fingerprints in SD File present in a data field with Fingerprint substring in its label by loading all fingerprints data into memory and create a SampleFPHexTanimotoSimilarity.csv file containing sequentially generated compound IDs with Cmpd prefix, type:

```
% SimilarityMatricesFingerprints.pl -o SampleFPHex.sdf
```

To generate a similarity matrix corresponding to Tanimoto similarity coefficient for fingerprints bit-vector strings data corresponding to supported fingerprints in FP file by loading all fingerprints data into memory and create a SampleFPHexTanimotoSimilarity.csv file along with compound IDs retrieved from FP file, type:

```
% SimilarityMatricesFingerprints.pl -o SampleFPHex.fpf
```

To generate a lower triangular similarity matrix corresponding to Tanimoto similarity coefficient for fingerprints bit-vector strings data corresponding to supported fingerprints in text file present in a column name containing Fingerprint substring by loading all fingerprints data into memory and create a SampleFPHexTanimotoSimilarity.csv file containing compound IDs retrieved from column name containing CompoundID substring, type:

```
% SimilarityMatricesFingerprints.pl -o --InputDataMode LoadInMemory
--OutMatrixFormat RowsAndColumns --OutMatrixType LowerTriangularMatrix
SampleFPHex.csv
```

To generate an upper triangular similarity matrix corresponding to Tanimoto similarity coefficient for fingerprints bit-vector strings data corresponding to supported fingerprints in text file present in a column name containing Fingerprint substring by loading all fingerprints data into memory and create a SampleFPHexTanimotoSimilarity.csv file in IDPairsAndValue format containing compound IDs retrieved from column name containing CompoundID substring, type:

```
% SimilarityMatricesFingerprints.pl -o --InputDataMode LoadInMemory
--OutMatrixFormat IDPairsAndValue --OutMatrixType UpperTriangularMatrix
SampleFPHex.csv
```

To generate a full similarity matrix corresponding to Tanimoto similarity coefficient for fingerprints bit-vector strings data corresponding to supported fingerprints in text file present in a column name containing Fingerprint substring by scanning file without loading all fingerprints data into memory and create a SampleFPHexTanimotoSimilarity.csv file containing compound IDs retrieved from column name containing CompoundID substring, type:

```
% SimilarityMatricesFingerprints.pl -o --InputDataMode ScanFile
--OutMatrixFormat RowsAndColumns --OutMatrixType FullMatrix
SampleFPHex.csv
```

To generate a lower triangular similarity matrix corresponding to Tanimoto similarity coefficient for fingerprints bit-vector strings data corresponding to supported fingerprints in text file present in a column name containing Fingerprint substring by scanning file without loading all fingerprints data into memory and create a SampleFPHexTanimotoSimilarity.csv file in IDPairsAndValue format containing compound IDs retrieved from column name containing CompoundID substring, type:

```
% SimilarityMatricesFingerprints.pl -o --InputDataMode ScanFile
--OutMatrixFormat IDPairsAndValue --OutMatrixType LowerTriangularMatrix
SampleFPHex.csv
```

To generate a similarity matrix corresponding to Tanimoto similarity coefficient using algebraic formulism for fingerprints vector strings data corresponding to supported fingerprints in text file present in a column name containing Fingerprint substring and create a SampleFPCountTanimotoSimilarityAlgebraicForm.csv file containing compound IDs retrieved from column name containing CompoundID substring, type:

```
% SimilarityMatricesFingerprints.pl -o SampleFPCount.csv
```

To generate a similarity matrix corresponding to Tanimoto similarity coefficient using algebraic formulism for fingerprints vector strings data corresponding to supported fingerprints in SD file present in a data field with Fingerprint substring in its label and create a SampleFPCountTanimotoSimilarityAlgebraicForm.csv file containing sequentially generated compound IDs with Cmpd prefix, type:

```
% SimilarityMatricesFingerprints.pl -o SampleFPCount.sdf
```

To generate a similarity matrix corresponding to Tanimoto similarity coefficient using algebraic formulism vector strings data corresponding to supported fingerprints in FP file and create a SampleFPCountTanimotoSimilarityAlgebraicForm.csv file along with compound IDs retrieved from FP file, type:

```
% SimilarityMatricesFingerprints.pl -o SampleFPCount.fpf
```

To generate a similarity matrix corresponding to Tanimoto similarity coefficient for fingerprints bit-vector strings data corresponding to supported fingerprints in text file present in a column name containing Fingerprint substring and create a SampleFPHexTanimotoSimilarity.csv file in IDPairsAndValue format containing compound IDs retrieved from column name containing CompoundID substring, type:

```
% SimilarityMatricesFingerprints.pl --OutMatrixFormat IDPairsAndValue -o
SampleFPHex.csv
```

To generate a similarity matrix corresponding to Tanimoto similarity coefficient for fingerprints bit-vector strings data corresponding to supported fingerprints in SD file present in a data field with Fingerprint substring in its label and create a SampleFPHexTanimotoSimilarity.csv file in IDPairsAndValue format containing sequentially generated compound IDs with Cmpd prefix, type:

```
% SimilarityMatricesFingerprints.pl --OutMatrixFormat IDPairsAndValue -o
SampleFPHex.sdf
```

To generate a similarity matrix corresponding to Tanimoto similarity coefficient for fingerprints bit-vector strings data corresponding to supported fingerprints in FP file and create a SampleFPHexTanimotoSimilarity.csv file in IDPairsAndValue format along with compound IDs retrieved from FP file, type:

```
% SimilarityMatricesFingerprints.pl --OutMatrixFormat IDPairsAndValue -o
SampleFPHex.fpf
```

To generate a similarity matrix corresponding to Tanimoto similarity coefficient for fingerprints bit-vector strings data corresponding to supported fingerprints in SD file present in a data field with Fingerprint substring in its label and create a SampleFPHexTanimotoSimilarity.csv file containing compound IDs from mol name line, type:

```
% SimilarityMatricesFingerprints.pl --CompoundIDMode MolName -o
SampleFPHex.sdf
```

To generate a similarity matrix corresponding to Tanimoto similarity coefficient for fingerprints bit-vector strings data corresponding to supported fingerprints present in a data field with Fingerprint substring in its label and create a SampleFPHexTanimotoSimilarity.csv file containing compound IDs from data field name Mol\_ID, type:

```
% SimilarityMatricesFingerprints.pl --CompoundIDMode DataField
--CompoundIDField Mol_ID -o SampleFPBin.sdf
```

To generate similarity matrices corresponding to Buser, Dice and Tanimoto similarity coefficient for fingerprints bit-vector strings data corresponding to supported fingerprints present in a column name containing Fingerprint substring and create SampleFPBin[CoefficientName]Similarity.csv files containing compound IDs retrieved from column name containing CompoundID substring, type:

```
% SimilarityMatricesFingerprints.pl -b "BuserSimilarity,DiceSimilarity,
TanimotoSimilarity" -o SampleFPBin.csv
```

To generate similarity matrices corresponding to Buser, Dice and Tanimoto similarity coefficient for fingerprints bit-vector strings data corresponding to supported fingerprints present in a data field with Fingerprint substring in its label and create SampleFPBin[CoefficientName]Similarity.csv files containing sequentially generated compound IDs with Cmpd prefix, type:

```
% SimilarityMatricesFingerprints.pl -b "BuserSimilarity,DiceSimilarity,
TanimotoSimilarity" -o SampleFPBin.sdf
```

To generate similarity matrices corresponding to CityBlock distance and Tanimoto similarity coefficients using algebraic formulism for fingerprints vector strings data corresponding to supported fingerprints present in a column name containing Fingerprint substring and create SampleFPCount[CoefficientName]AlgebraicForm.csv files containing compound IDs retrieved from column name containing CompoundID substring, type:

```
% SimilarityMatricesFingerprints.pl -v "CityBlockDistance,
```

```
TanimotoSimilarity" -o SampleFPCount.csv
```

To generate similarity matrices corresponding to CityBlock distance and Tanimoto similarity coefficients using algebraic formulism for fingerprints vector strings data corresponding to supported fingerprints present in a data field with Fingerprint substring in its label and create SampleFPCount[CoefficientName]AlgebraicForm.csv files containing sequentially generated compound IDs with Cmpd prefix, type:

```
% SimilarityMatricesFingerprints.pl -v "CityBlockDistance,
TanimotoSimilarity" -o SampleFPCount.sdf
```

To generate similarity matrices corresponding to CityBlock distance Tanimoto similarity coefficients using binary formulism for fingerprints vector strings data corresponding to supported fingerprints present in a column name containing Fingerprint substring and create SampleFPCount[CoefficientName]Binary.csv files containing compound IDs retrieved from column name containing CompoundID substring, type:

```
% SimilarityMatricesFingerprints.pl -v "CityBlockDistance,
TanimotoSimilarity" --VectorComparisonFormulism BinaryForm -o
SampleFPCount.csv
```

To generate similarity matrices corresponding to CityBlock distance Tanimoto similarity coefficients using binary formulism for fingerprints vector strings data corresponding to supported fingerprints present in a data field with Fingerprint substring in its label and create SampleFPCount[CoefficientName]Binary.csv files containing sequentially generated compound IDs with Cmpd prefix, type:

```
% SimilarityMatricesFingerprints.pl -v "CityBlockDistance,
TanimotoSimilarity" --VectorComparisonFormulism BinaryForm -o
SampleFPCount.sdf
```

To generate similarity matrices corresponding to CityBlock distance Tanimoto similarity coefficients using all supported comparison formulisms for fingerprints vector strings data corresponding to supported fingerprints present in a column name containing Fingerprint substring and create SampleFPCount[CoefficientName][FormulismName].csv files containing compound IDs retrieved from column name containing CompoundID substring, type:

```
% SimilarityMatricesFingerprints.pl -v "CityBlockDistance,
TanimotoSimilarity" --VectorComparisonFormulism All -o SampleFPCount.csv
```

To generate similarity matrices corresponding to CityBlock distance Tanimoto similarity coefficients using all supported comparison formulisms for fingerprints vector strings data corresponding to supported fingerprints present in a data field with Fingerprint substring in its label and create SampleFPCount[CoefficientName][FormulismName].csv files containing sequentially generated compound IDs with Cmpd prefix, type:

```
% SimilarityMatricesFingerprints.pl -v "CityBlockDistance,TanimotoSimilarity"
--VectorComparisonFormulism All -o SampleFPCount.sdf
```

To generate similarity matrices corresponding to all available similarity coefficient for fingerprints bit-vector strings data corresponding to supported fingerprints present in a column name containing Fingerprint substring and create SampleFPHex[CoefficientName].csv files containing compound IDs retrieved from column name containing CompoundID substring, type:

```
% SimilarityMatricesFingerprints.pl -m AutoDetect --BitVectorComparisonMode
All --alpha 0.5 -beta 0.5 -o SampleFPHex.csv
```

To generate similarity matrices corresponding to all available similarity coefficient for fingerprints bit-vector strings data corresponding to supported fingerprints present in a data field with Fingerprint substring in its label and create SampleFPHex[CoefficientName].csv files containing sequentially generated compound IDs with Cmpd prefix, type:

```
% SimilarityMatricesFingerprints.pl -m AutoDetect --BitVectorComparisonMode
All --alpha 0.5 -beta 0.5 -o SampleFPHex.sdf
```

To generate similarity matrices corresponding to all available similarity and distance coefficients using all comparison formulism for fingerprints vector strings data corresponding to supported fingerprints present in a column name containing Fingerprint substring and create SampleFPCount[CoefficientName][FormulismName].csv files containing compound IDs retrieved from column name containing CompoundID substring, type:

```
% SimilarityMatricesFingerprints.pl -m AutoDetect --VectorComparisonMode
All --VectorComparisonFormulism All -o SampleFPCount.csv
```

To generate similarity matrices corresponding to all available similarity and distance coefficients using all comparison formulism for fingerprints vector strings data corresponding to supported fingerprints present in a data field with Fingerprint substring in its label and create SampleFPCount[CoefficientName][FormulismName].csv files containing sequentially generated compound IDs with Cmpd prefix, type:

```
% SimilarityMatricesFingerprints.pl -m AutoDetect --VectorComparisonMode
All --VectorComparisonFormalism All -o SampleFPCount.sdf
```

To generate a similarity matrix corresponding to Tanimoto similarity coefficient for fingerprints bit-vector strings data corresponding to supported fingerprints present in a column number 2 and create a SampleFPHexTanimotoSimilarity.csv file containing compound IDs retrieved column number 1, type:

```
% SimilarityMatricesFingerprints.pl --ColMode ColNum --CompoundIDCol 1
--FingerprintsCol 2 -o SampleFPHex.csv
```

To generate a similarity matrix corresponding to Tanimoto similarity coefficient for fingerprints bit-vector strings data corresponding to supported fingerprints present in a data field name Fingerprints and create a SampleFPHexTanimotoSimilarity.csv file containing compound IDs present in data field name Mol\_ID, type:

```
% SimilarityMatricesFingerprints.pl --FingerprintsField Fingerprints
--CompoundIDMode DataField --CompoundIDField Mol_ID -o SampleFPHex.sdf
```

To generate a similarity matrix corresponding to Tversky similarity coefficient for fingerprints bit-vector strings data corresponding to supported fingerprints present in a column named Fingerprints and create a SampleFPHexTverskySimilarity.tsv file containing compound IDs retrieved column named CompoundID, type:

```
% SimilarityMatricesFingerprints.pl --BitVectorComparisonMode
TverskySimilarity --alpha 0.5 --ColMode ColLabel --CompoundIDCol
CompoundID --FingerprintsCol Fingerprints --OutDelim Tab --quote No
-o SampleFPHex.csv
```

To generate a similarity matrix corresponding to Tanimoto similarity coefficient for fingerprints bit-vector strings data corresponding to supported fingerprints present in a data field with Fingerprint substring in its label and create a SampleFPHexTanimotoSimilarity.csv file containing compound IDs from molname line or sequentially generated compound IDs with Mol prefix, type:

```
% SimilarityMatricesFingerprints.pl --CompoundIDMode MolnameOrLabelPrefix
--CompoundIDPrefix Mol -o SampleFPHex.sdf
```

To generate a similarity matrix corresponding to Tanimoto similarity coefficient for fingerprints bit-vector strings data corresponding to supported fingerprints present in a data field with Fingerprint substring in its label and create a SampleFPHexTanimotoSimilarity.tsv file containing sequentially generated compound IDs with Cmpd prefix, type:

```
% SimilarityMatricesFingerprints.pl -OutDelim Tab --quote No -o SampleFPHex.sdf
```
